

## Eyelash Extension Theory Test

1. What is used to bond the eyelash extensions to the natural lashes?

- a. A water based adhesive that bonds the lashes for at least 6 months, with no refills necessary
- b. Artificial nail glue, which can also be used effectively with the lashes.
- c. Cyanoacrylate adhesive with a bonding power of 6 to 8 weeks. It is humidity and temperature based adhesive that is kept at room temperature away from sunlight and heat sources. The adhesive is made for lashes only and should never get into the eyes or on the skin as it is a membrane irritant. If it gets into the eyes, the technician needs to rinse the eye with water immediately and send their clients to get immediate medical assistance.
- d. All of the above

2. What are signs that the adhesive should be replaced?

- a. It has been months since you have opened the adhesive
- b. The colors are beginning to separate into black, clear, and opaque
- c. It is thick and gooey
- d. It is COMPLETELY DRY inside the bottle
- e. All of the above

3. What causes eyelash extensions to fall off in large amounts within a very short time?

- a. Oil based products are used around the eye area
- b. Rubbing the lashes and/or pulling at the lashes
- c. Playing with the lashes
- d. All of the above

4. A client has a reaction after an eyelash extension application. Her eyes are swollen shut, painful and itchy. She messages or calls you for help, what do you do?

- a. Blame the eyelash extension supplier, claiming that the adhesive was the problem
- b. Have the client take Benadryl immediately to calm the reaction, breathe, and assess the situation.
- c. Have your client come into your studio to assess the situation asking yourself: Did I follow all sanitation procedures? Did I check beforehand whether she had any allergies or contraindications? Did I apply the lashes too close to the skin?  
Explain that she is having an allergic reaction and that you must banana peel only to remove the extensions and send her to see a Doctor.
- d. All of the above

5. Eyelash extension adhesives can be stored in the car, in high heat, near a window, or left outside between services. They also do not expire for 3 months after purchase.

- a. True
- b. False

6. Qualities of a great full set or refill include: a set or fill done in an hour, gaps between the lashes, uneven shape, and incredibly thick lashes applied to frail and thin lashes.

- a. True
- b. False

7. Eyelash Extensions should be applied as follows:

- a. Touching the lids of the client
- b. Leaving a minimum of 1 to 2mm from the lash line of the client.
- c. Anywhere near the eye area
- d. All of the above

8. How long do lash extensions last?

9. Sets and fills should always contain at least 80% plus coverage per eye.

- a. True
- b. False

10. How often does a client need to come in for a fill?

11. How much extensions typically remain on my client if they come for fills every 3 weeks?

12. Should I use 0.20mm or 0.25mm diameter lashes on most clients?

What will happen if i do?

13. How much longer of an extension than the natural lash can we use for healthy weight?

14. How would you describe your lash work?

15. Describe to me proper aftercare?

16. Explain to me perfect isolation?

17- My lashes keep popping off while I'm lashing. Why is this and what can i do to prevent and fix this problem?

18- 17- Describe to me perfect sanitization, sterilization, and disinfection?
